

Currently, claims for psychotropic injectables are being denied in CHAMPS because the combination of billing and rendering NPI on the claim is not recognized as appropriate for the specific procedure codes being billed. This is an internal coding issue that MDCH is addressing. MDCH will add a new specialty to all fee-for-service CMH enrollments in CHAMPS so that CMHs currently enrolled as Children's Waiver and/or SED Waiver agencies can bill for psychotropic drugs also. MDCH must also add the specialty to claims adjudication and financial management logic. All of the necessary changes are expected to be complete in early to mid-December. After completion, MDCH will reprocess all of the affected claims.

Claims for psychotropic injectables submitted with a billing NPI that is enrolled as only a Medical Group are not experiencing this issue and can continue to be billed. When billing for psychotropic injectables, the rendering provider on the claim must be actively enrolled in CHAMPS as a physician and associated to the billing NPI on the claim.
