

**SCOPE OF SERVICES
DESIGN SERVICES – QUESTIONS & ANSWERS No. 2**

JN 106194C

Question 1: I noticed there was a posting that said only non-motorized use should be factored for structures? This is counter to the standard emergency vehicle need. Please clarify this.

Answer 1: The existing structures and trail are intended for pedestrian use only and are limited to access with non-motorized vehicles only. The design requirements for the proposed structure will allow loading for 10 tons vehicles in case of emergency and maintenance purposes.

Question 2: Are the southern limits of the project at the south ROW of Sibley or beyond? Please clarify.

Answer 2: The southern limits will be at the existing connection to the Willow Metro Park south of Sibley.

Question 3: There was nothing in the survey or wetland folder for the FTP site provided when I last checked. Can you verify that this is available?

Answer 3: Reports of wetland assessment and CADD files for design survey available for use of this project are currently posted on FTP site <ftp://ftp.michtrans.net/> under JN106194.
